Q: Accessing Box2D object after scene update? Does anyone know how I can access the Body and the Contacts from a Box2D C++ class after the scene has been updated. Let me explain what I want to accomplish in more detail. I've read through the Box2D tutorial at the link below, and have done it like they explain it there. I've created a character via the body factory and body created and added joints to the body. If I exit and then restart the scene or just test the game in that state, the body is not connected to the world. They have to be linked up after the scene has finished updating. I'm trying to avoid having to create all the bodies and then add joints to them when the new scene starts. I've seen suggestions to update the contacts in my example below, but there isn't much to it right now. Just two bodies and two contacts. Can I just call something like the world->Update after the scene has finished updating? void MyCollision::Test::update() { b2Contact* pContact = (b2Contact*)(world->GetContactList()); while(pContact) { b2Contact* pC = pContact; //check for a player that was moved from the list if(pC->GetFixtureA()->GetBody() == m_pB2Body) { float32 x1 = pC->GetFixtureA()->GetPosition().x; float32 x2 = pC->GetFixtureB()->GetPosition().x; if(x1

What do our patients want? A qualitative study of the perspectives of young women with cervical cancer and their partners. The aim of this study was to gain insight into the perspectives of young women with cervical cancer and their partners, the journey of making a decision to undergo surgery, and the impact on them of the eventual results of the surgery, complications, and the likelihood of the recurrence of their cancer. From August 2008 to April 2009 a qualitative study was conducted in Sweden, using focus group interviews. The study was structured in four main areas: The participants' perspectives of the consequences of the disease, decision-making for surgery, aspects related to the surgery, and the experiences of the ensuing medical care. In total, 17 women with cervical cancer and their partners participated in the study. Four thematic categories were constructed based on the data: "the decision to change: the influences on the partners and young women"; "emotional reactions and reactions to cancer"; "the situation of their young children"; and "postoperative experiences." The relationship between the participant and the partner influenced the decision to make a change. The participants emphasized that their partners were important in a decision to undergo surgery. The results from this study may be used as a tool for the communication between the young women and their partners. The participants had a desire to be contacted by their partners regarding surgery and information. The partner's involvement is important for the purpose of dealing with the young women and their daughters. Findings from this study suggest that young women with cervical cancer and their partners are concerned about the future of their young daughters.
