What's New In Apex MOV Converter?

Advertisements Processing and converting videos is a common need but finding the time to do this for a large number of files can be difficult. Apex MOV Converter is a simple program which allows you to convert AVI, MPEG, Windows Media, QuickTime and Real Player files to the MOV format. The tool comes with a user-friendly interface in which you can import videos by using the file browser only, because the "drag and drop" method is not supported. Batch processing is possible. In the queue you can view the source, split span, frame size, output type and status of each file. So, after you establish the output destination, you can proceed with the conversion process. In addition, you can configure audio and video settings when it comes to the codec, frame rate, size, rate and bitrate. Plus, you can preview the clip and cut it by marking the start and end time, as well as enable Apex MOV Converter to automatically turn off the computer when all tasks are completed. The application uses a moderate-to-high amount of system resources and quickly finishes a conversion job while maintaining a pretty good image and sound quality. On the other hand, Apex MOV Converter froze several times in the middle of the conversion tasks during our tests, and we were forced to restart the application. Plus, you cannot select multiple videos at once to import them into the list, nor specify the output video name. Also, other processes clearly run slower in the background, till the point that they temporarily freeze on a regular basis. We suggest you look for a more stable video encoder than Apex MOV Converter.
