That's why we're launching a new Google Institute for the Study of the Future of Work. Over the next three months, we'll be exploring the effects of automation, cognitive

technology and the changing nature of work on the economy. We'll share data, insights and analysis. And we're looking for your own take on how the future will impact the global labor market. What will the impact be on jobs, the role of government, and how the economy will continue to evolve? Please join us by submitting your own essays, or nominating a colleague who might be a good fit. We're also working on a global study of what the future of work will be like for people around the world. We'd like

you to participate in that by joining our community. The Institute will be launching with a series of videos, starting with "This time is different" from award-winning filmmaker Jia Tolentino. She examines the rapid changes that have occurred in the workplace and what they mean for jobs. Her film explores the social and political implications of the transformation of work and the transition to new ways of doing things. Here's where you can find the videos, as well as learn more about the Institute and how you can

A phospholipid dendrimer (G3-PEI dendrimer) was synthesized by the Schiff base linkage between PEI and 1,2-dipalmitoyl-sn-glycero-3-phosphoethanolamine (G3-PEI-Na) as a template. G3-PEI dendrimers were completely trapped in the lipid bilayer phase of multibilayers and were reconstituted with the lipid bilayer of liposomes, and the amount of trapped G3-PEI dendrimers increased depending on

the number of generation of G3-PEI dendrimers. The selectivity of binding to the lipid bilayer of liposomes
