AutoCAD is built around a platform known as the AutoCAD Architecture (AutoArch) that allows developers to build other graphical applications using the same underlying technology. Although many graphical applications are now built using this platform, there are some built specifically for AutoCAD users. Some AutoCAD add-ons are shared with other Autodesk software such as AutoCAD LT. The current version of AutoCAD is AutoCAD 2020. What is AutoCAD? AutoCAD is a commercial, desktop CAD software that operates on PC or Mac computers. It enables users to plan, model, and design anything that can be built from three-dimensional forms including houses, commercial and industrial buildings, furniture, interior spaces, machines, and anything else that can be imagined. An efficient gene fusion strategy was developed in order to determine the location of the actin-binding domain of villin (villin-ABD), a membrane-cytoskeleton cross-linking protein. A gene fusion consisting of the cDNA encoding villin, its hinge region and ABD, was constructed and used as a transfection vector in conjunction with the cDNA encoding an EGFP marker. Using this fusion vector, an actin-dependent cell-adhesion assay was developed which proved to be an effective and efficient system to detect ABDs. Furthermore, a COOH-terminal epitope tag was introduced into the villin gene to facilitate detection of the fusion proteins. In this system, it was found that the ABD of villin is located between the COOH-terminal end and the hinge region. a1f647c40b
