Top stories Britain's national debt has passed £1tn, or £1,000,000,000,000, making the UK the world's first government to reach this astronomical sum. The landmark figure, reached on the 100th anniversary of the start of the first world war, was confirmed by the Office for National Statistics on Sunday morning. Although the amount remains smaller than the US national debt, which stands at \$21tn, it's a remarkable milestone for a nation that until a few weeks ago was heavily criticised for not being fiscally responsible. The UK is not the only OECD country to have reached the milestone. France, Japan, the Netherlands, Australia and Sweden are also past it. Only Sweden's record is better, having reached \$1,000,000,000,000 on its 75th anniversary. The UK is the only developed economy that has not reached the \$1tn mark. The figure will not be officially confirmed until the budget is published on Wednesday. In an article for the Guardian on Sunday morning, the head of the Institute for Fiscal Studies, Paul Johnson, said the tax and spending plans that follow the budget will decide whether the UK has a “golden decade” or a “perilous decade” of sustained growth. “The deeper the cuts, the more confident I would be that it will be a golden decade,” he said.
