See, e.g., Smith, 533 F.3d at 1057 ("If a deferred adjudication qualifies as a conviction under § 922(g), the district court properly sentenced him as an Armed Career Criminal."); Lowrimore, 528 F.3d at 720 ("We conclude that the term 'conviction' in § 922(g) includes deferred adjudications for sentence"); Potter, 463 F.3d at 1100 ("[W]hen the statutory language is unambiguous, we need look no further."); Fratta, 468 F.3d at 1133 (noting "most persuasive authority in this circuit" is to the effect that "a deferred adjudication may be treated as a 'conviction'"); Johnson, 256 F.3d at 914-15 (same). This year's U.S. Open champ is not exactly returning from knee surgery with a wooden racquet. He had surgery on his left knee in early May. Haas hopes to be healthy enough to play through the clay season and then be able to get in shape for the grass. He said he is not sure if he will be able to swing the racquet the same way. In any case, the knee is not really the issue. Haas, who won the U.S. Open in July for his first Grand Slam title, just wants to be a good player again. "That's what I'm really going for," he said. "At this point, that's my job. I haven't really won anything and I think it's just time to put it all together." As a senior at Stanford, Haas won the 2009 NCAA singles title, and had a 32-6 record in singles. As a junior, he was a two-time NCAA singles champion, including a runner-up effort in 2010. In his first year on tour, Haas has been a top-10 player, finishing last season ranked No. 7. He had a good

Quality improvements to the line-based and freehand tools for 2D work. Most importantly, the ability to: Import and modify block, vector, and bitmap drawings with ease. Choose from a variety of import file formats. Gain 1:1 control over all exported drawings. Work with imported and modified drawings in your drawings all the way through the drawing creation process. Automatic creation of stamp files with detailed information about the project. What's New for Modeling: Create virtual physical models in 3D space and get precise control. With one click, snap and connect drawing elements to create your model from a drawing and instantly have a robust model to work with. This drawing method makes it easier to create complex geometric forms, give your drawings a realistic appearance, or enable collaborative work in 3D. With a single click, you can snap drawing elements into your 3D models. Need to take a 2D model of a car and move it to 3D? A single click and you're there. Import a digital model? 1 click and you're there. Without additional drawing steps, create virtual physical models and more with a single click. Access geometric elements using the freehand tool or 2D line tools. The freehand tool works with geometric elements such as points, circles, lines, and arcs. The line tools work with geometric elements such as straight and curved lines, circles, and arcs. Use the cross-hair tool to create accurate lines and arcs, or move elements by offsetting their location. By rotating the cross-hair tool, you can precisely control the angle and location of your line. Plus, the line tool can also snap to existing lines or paths, and you can create cross-hairs by double-clicking. When a model is part of a group, you can also extend your line or cross-hair tool to more than one element in a group. You can draw and edit in real-time in AutoCAD with the 2D editing tools or 3D tools. With the 2D editing tools, you can insert, delete, and move any type of element including blocks, text, and arrows. You can also modify elements such as lines, curves, and surfaces. With the 3D tools, you can view your drawings in any orientation, choose how far you'd like to
