AutoCAD has served as the standard for general CAD software since its introduction. More than 4.4 million

people have purchased AutoCAD, as of October 2017. With the latest version, AutoCAD 2018, the company offers two editions: AutoCAD LT (single-user license), and AutoCAD R2019 (multiple-user license). Contents show] History In the early 1980s, Autodesk developed the first commercially available computer-aided design (CAD) software, AutoCAD.

AutoCAD originally ran on the Apple II, and later on the Atari 800. The first versions were developed by a group of artists and engineers from MIT who called themselves the Sketchpad team.[1] The original team split into two groups: one working on the initial CAD technology and one on the user interface. The UI group, the Sketchpad team, went on to develop

AutoCAD's basic user interface, as well as others. The core team led by Dan Sandin and David Buell was developing the CAD technology. In November 1982, an Autodesk representative met with the MIT Sketchpad team and began the negotiation for AutoCAD. At the time, the MIT Sketchpad group only had four to five months to deliver the CAD technology and finish the user interface in time for the AutoCAD release date of December 1982. The deal was a 1:1 ratio, where MIT would get an equity stake in Autodesk, in exchange for Autodesk's license to develop the CAD technology, which was code-named "MDP". MIT took title of the AutoCAD copyright.[2] AutoCAD was first sold on 6 June 1983 for \$1,295. AutoCAD's successful

release and adoption led to further development, and new versions of AutoCAD were released every six months. In October 1999, the company launched AutoCAD LT,[2] a version of AutoCAD for small businesses (i.e. not large organizations with many employees). AutoCAD LT is a single-user version that can only be used by one person. The user can sign up for a shared AutoCAD LT license for use by several people working on a project. Version history AutoCAD LT, the first version of AutoCAD released for small businesses, was a flat-rate license for \$5,000, with the technology being shared between all users. These

been suggestions that he might consider retirement. There was a rumour that he had purchased a home in the Los Angeles area. Now he has done it. The source of the rumour was Brendan Rodgers, who served in a similar role with the Reds last season. Rodgers was widely seen as Votto's mentor. Votto was thought to be due a contract extension and Rodgers will leave his role in May. But Votto is already on record as saying: "I haven't decided yet." [Read More](#) [Read More](#) Votto has been a Reds mainstay since moving to the team from the Florida Marlins. The thought of a move away would have been unthinkable a couple of seasons ago, but that has been proved wrong. It is just one of those happenings that will make the Reds' fans laugh: they only wish

they could turn it back. But it is a reality that the Reds have to face. They will need Votto at his peak for another five years and will hope that when the time comes that he does indeed announce his retirement there is a replacement ready to step in and make a statement. But it is just one of those happenings that will make the Reds' fans laugh: they only wish they could turn it back.
