Like many software applications, AutoCAD is often thought of as a "professional" tool that is used for complex drawing and drafting projects, which in many cases it is, but there is no reason you can't use AutoCAD for simple, everyday projects as well. This AutoCAD tutorial will teach you how to use the basic features of AutoCAD including drawing tools, layers, editing, and so on. AutoCAD Basic Tutorial, Part 1: File Management, Drawing, Layers, and Commands Before we dive into AutoCAD, I want to go over some of the basics of the software. I'm assuming that you've used an application like Google Docs before, so I'll give you a refresher on how to navigate a file. When you open a new file, by default it will be displayed in the "Drawing" tab. This is the default tab for every file. The default view also remembers which tool you used to create the file. If you want to create a new file, in the top right of the screen, click the green plus sign (+). Then you can name the file and select a type of file, whether it's drawing, text, image, or video. If you want to open a file, you can either use the file name, or you can click the icon of the file. The icon also changes based on the file type. For example, a video file has the video icon, and an image file has the image icon. If you click the file icon, it will open in your default software viewer. You may have to open the file in another software application, depending on the type of file. You can also use the file explorer to access files directly from Windows, macOS, and Linux. From the File menu, you can also "open," "copy," "paste," "make a new drawing," and "exit." You can create your own custom commands for any file type, as long as they are contained in a macro. For example, you can make a macro that includes a command to draw the file, and another command to rotate the file 90 degrees. In the AutoCAD Help, the Macros Guide is a great place to learn how to make your own macros. To create a

'When it's time to eat, Lay, you should eat, And not just any kind. Serve at least two kinds Of food, both red and green. Then, you should call up the others. 'Lay, when they answer, Pretend you're still asleep, And ask them for advice. When they see that you're tired, They will pretend to be awake. By mid-morning, all will be right, 'But if you need more advice, Lay, seek it from those old. If you can't find any, Lay, bring the young ones around. But when you're done, Have them go back to sleep. 'Lay, you should go to sleep. You'll be exhausted, And no one will be listening. When you wake up, your strength Will make you wiser, And you'll find that it's getting dark.' This poem was inspired by a dream that I had on the eve of the Women's March. On a cold winter's morning, I woke up in the darkness to a gentle knocking on my door. I assumed it was my mother, who is visiting me. Then I heard the others call out to me, "It's time to go. We're tired. Please come along with us." The morning air was filled with the light of a burning candle, and what I saw was nothing short of a miracle.
