

In June 2005, Autodesk acquired MEP Services, Inc., the leading provider of computer-aided design (CAD) and drafting software for the architectural, engineering and construction markets. The MEP division has served some 18,000 customers and been part of the Autodesk® solutions portfolio since 1982. The acquisition, along with Autodesk-owned SketchUp software, completes Autodesk's strategy to become the leading provider of software for building information modeling (BIM) across multiple platforms. History of AutoCAD The AutoCAD drafting and designing platform was developed as a desktop application that would run on a PC. In 2006, Autodesk launched AutoCAD 360, which is a web-based version of AutoCAD. AutoCAD 2011 from (2011). The AutoCAD drawing module was released as a module that was integrated with the native Windows operating system in 1983, for use with applications running on the Windows operating system. AutoCAD 2012 from (2012). The application is a multi-platform CAD application that can run on Windows, macOS, and Linux operating systems. The application has since been ported to mobile devices such as smartphones and tablets, with Autodesk acquiring the rights to sell mobile editions of AutoCAD in 2018. AutoCAD 2018 from (2018). AutoCAD 2018 The current version of AutoCAD is AutoCAD 2018. An updated version of AutoCAD 2013 was released in July 2018, and the latest release of AutoCAD is AutoCAD 2019. AutoCAD 2020 was released in 2020. Features This table is provided as a reference for the features of AutoCAD available in each AutoCAD release. When an user is logged in it is stored in the url parameters like so: ?login=true&username=admin&password=secret I want to hide the parameter "password" to the user because I want the user to input this with a textbox. I want the textbox to be readonly. How could I do that? I have tried to write some javascript for that: `if (document.getElementById('password').readonly) { window.location.replace('?login=true&username=admin&password=secret'); }` But it only redirects me and does not hide the parameter. Is there another solution for this or do I have to change the url parameter to something else? A: You can do this in PHP: `$url = '?login=true&username=admin&password=secret'; if(!isset($_GET['password'])) { header('location:'.$url); exit(); }` Or in JS: `if(!window.location.search.match(/password=true$/)) { window.location = window.location.href + "?password=true"; }` The studies on eukaryotic translation initiation are aimed at elucidating the mechanisms involved in the assembly of translation initiation complexes. Experiments performed over the last five years of this grant have shown that initiation of protein synthesis in vertebrate cells involves a large number of proteins and protein-RNA interactions. The focus of the present proposal is the characterization of a 40S initiation factor that we have discovered during the last grant period, termed eIF-5B. This factor is synthesized by the nucleus as an inactive precursor which is then imported into the cytoplasm as a latent complex consisting of a heterodimer of the light and heavy subunits of the factor. Add a comment to your drawings to provide feedback. After, you can either markup your comments with the marker icon or import them automatically into your drawing. Speed up your process by creating and following markup sets. Use Markup Assist to import a set of predefined symbols, changing your work from drafting to design. Symbols Organizer: Organize symbols in a single window or in separate ones. View and sort your symbols as they are organized in the Symbols Organizer, or access them from any panel in your drawing. Sketchbooks and Charts: Add Sketchbook and Chart layouts as you draw. Create a layout for your new drawing right from the on-screen controls. Smart Views: Use toolbars and icons to add and configure Smart Views for the drawing window, for instance along axes, planes, or more. Trig Tools: Apply trigonometry to your drawings. Use Traceable distance and box dimensions to create dimensions, for example. New Layers: Easily place 2D and 3D models in multiple views or phases of a drawing. Place and route a 3D model by setting axis constraints, or add a 3D model as a background. You can also create topographic layers to place 3D models on the terrain. Direct Dimensions: Dimension any data in a manner that will not damage your drawing. Dimension data to any coordinate, from any object in your drawing. Projections: Use projections, for example, to create orthographic, azimuthal, and geographic projections. Rotate and Move: Rotate and move any object in a vector manner. Easily create special rotation and movement geometries. Drawing Widgets: Change and add your drawing canvas, the Quick Statistics box, and more. Markup In One Panel: Import XML markup into your drawings in one panel. Import it from the web, from another drawing, or from a Word document. Add a Comment to Your Drawings: Import comments from printed paper or PDFs, add them to your drawings, and mark them with the same color as the corresponding objects. OpenXML tools: Import and Export OpenXML files using the XML Files tool. PDM Export and Indexing
