Q: Is it possible to place code in header file? I know about in Razor. But I think that is deprecated. Is it possible to place code in header

file (like is possible in view)?
UPDATE Sorry for my bad English. I think that looks like:
#if SqlQueryResult @Html.ActionLink("@0", "Delete", new { id=item.Id }) #endif Or maybe I can use some other syntax like (and also is it possible to use it in other languages, not only C#)?
