We apologize for the inconvenience. The I-DABO server is an open source project developed by the same people behind DabbleDB. It is aimed at providing access to files on disk which can be browsed and searched using file queries, and their results returned to the users through queries as well. The most distinctive feature of I-DABO is its ability to browse the file system by similarity, a great tool for getting back to a file quickly if it was recently modified. Similarity is determined by regular expressions which are built-in into the database, allowing a fast look for files matching particular criteria. I-DABO makes use of Nutch and Lucene for indexing, so it can be easily integrated into a web crawler. It also provides users with some basic analysis on their searches, enabling them to quickly sort results and identify a topic of interest. I-DABO is one of the

Pikere Review by Abid Haddad: The only reason I am writing this review is to tell everyone that I am having trouble using this program. It won't run from the IDE and the download link given is not working. I thought the problem was with my browser. I tried Firefox, Chrome, and Internet Explorer and none of them will load the site. I'm honestly shocked that this was done in Electron in 2019. For a program to not run on Windows 10, Internet Explorer, Firefox, Chrome, and Edge is extremely hard to believe. I don't think it was a typo either, I've searched a lot of time to find where the problem is. I'm starting to doubt the entire program. Our team of highly skilled developers has spent countless hours creating a program that will save you time and effort in uploading the same picture to social media accounts. It will not let you upload more than 4 profiles.
