5 Best Practices When Using Photoshop Elements There are several common best practices that users of Photoshop Elements should observe when editing images. Adjust the Sharpness When you are using any version of Photoshop, including Photoshop Elements, it is important to understand the effect of sharpness. Each image has sharpness – some parts are hard and other parts are soft. Sharpness is a measure of how sharp an image is. Sharpness is commonly used in the printing industry. Some photo editing software, such as Powerpoint, use sharpness to change the look of their images. For example, you may want to make a printed image more crisp. You can either adjust sharpness within a specific area of the photo or adjust the entire image. The difference between adjusting image sharpness and brightness or contrast can be confusing. Adjusting the image brightness and contrast actually adjusts the overall sharpness of the photo. Note: Certain Photoshop Elements editions offer the ability to adjust the image brightness and contrast on a per-picture basis. When adjusting the image sharpness, you can either make the image sharper or softer. To make an image softer, drag the slider towards the right. Alternatively, to make the image sharper, drag the slider towards the left. Adjust the Brightness When you are editing an image, it is common to adjust the brightness or contrast of an image. Brightness controls the amount of light in the photo. Note: Brightness is usually adjusted based on the overall intensity of the image. Similarly to sharpness, brightness adjustments can be made to either make the image brighter or darker. Since brightness is a part of every image, it is important to understand how to adjust the brightness of an image. Adjusting the image brightness can be done in two ways: Changing the overall brightness of the photo Changing the brightness within a specific area of the photo To change the overall brightness of a photo, make changes to the image brightness by adjusting the slider towards the right. The keyboard shortcut for changing the overall brightness is Command + / (forward slash). The control key for brightness can be set to any of the following: Windows: Ctrl + up arrow Mac: Cmd + up arrow Command + / (forward slash) Cmd + / (forward slash) a681f4349e

By Chris Kitching BBC Radio 4 There are many parts of the ancient Mediterranean world that are poorly understood They came from a culture that would have been all but unknown outside what is now Iraq. An analysis of the archaeological material shows that the Anatolian civilisation may have been a very complex civilisation. The team worked closely with Iraqi archaeologists. An excavation of a series of graves at a site in southern Iraq is the latest in a series of discoveries that are changing our view of the ancient world. The people are no longer seen as primitive cave dwellers. Mighty empires The Neolithic people of Anatolia had built cities and cities on a grand scale. We know that they used a lot of imported material from the Black Sea area. They had iron tools. They had a good understanding of writing but so far we have not had the luxury of being able to read their language Professor Ian Freestone Professor Ian Freestone from the University of Leicester is a world expert on Anatolia and has been part of the dig team. He said: "They had written language. They had iron, they had heavy-duty tools and they were highly organised. They had a cuneiform script and they are quite sophisticated. It so they must have been a really, really big empire. "They were wiped out by a cataclysmic event which is why you find the bones." The dig at Tell Brak is the first major prehistoric excavation to be undertaken in Iraq and most recently worked at Tell Mardikh in the north-east. Among the recent discoveries are the remains of a previously unknown early race, the antecedents to the Sumerians. However, Professor Freestone is clearly cautious. "We know that they used a lot of imported material from the Black Sea area. They had iron tools. They had a good understanding of writing but so far we have not had the luxury of being able to read their language. "How can you read something in which there is only a few words?" In the centre of the graves at Tell Brak there is evidence of the long tradition of the Anatolian civilisation. In the last 10,000 years there was clear evidence of change and the excavators believe the answer is not one of sudden appearance of an advanced culture but rather a gradual process of development. They believe there was a transformation.

Q: How to return exactly 500 in Postgres I have my function in PostgreSQL as following CREATE OR REPLACE FUNCTION detect\_special\_char\_in\_value (value VARCHAR(4000) ) RETURNS numeric AS \$\$ DECLARE special\_char\_idx NUMERIC; BEGIN FOR special\_char\_idx IN SELECT 1 FROM information\_schema.CHAR\_COLUMNS WHERE CHAR\_NAME = 'XA\_MAIN' AND CHARACTER\_MAXIMUM\_LENGTH = 1 LOOP RETURN special\_char\_idx; END LOOP; RETURN 0; END \$\$ LANGUAGE plpgsql; Now if I run this function as select detect\_special\_char\_in\_value('XA\_MAIN'); I expect to get 1 but I get 0 Am I doing anything wrong or is there any other way to make it return 1? A: You are returning 0, because your function doesn't return anything. You need to change RETURN special\_char\_idx; to RETURN special\_char\_idx; And also add RETURN special\_char\_idx after END;/\*\* \* Copyright 2013-2015, Facebook, Inc. \* All rights reserved. \* \* This source code is licensed under the BSD-style license found in the \* LICENSE file in the root directory of this source tree.
