Close to sunset on a misty autumn day in 1931, three men approach a new address in Chicago's Loop district, a site with one of the most unusual features in the neighborhood. It's a newly erected, 27-story building that looks like a giant typewriter, is covered in secret writing, and seems to have no purpose besides housing an impressive social club for the rich and powerful. Besides its architectural peculiarity, there's another unusual feature to this building. Someone or something has been massacring the residents, the only kind of person, place, or thing who could have done it. Terror grips the three men, who turn to an ally for assistance. Their partner, a powerful mage with a keen gift, looks at the address and reads the secret writing, which ends with the words "Cthulhu waits beneath." Suddenly he is told to stay out of sight, and he obeys. The three men are not so willing to stay hidden, and their investigation leads them to the gruesome truth behind the murders -- and the spell that was left behind to protect its target. Horrors Heart is an investigation by GM/players of a murder mystery based on H.P. Lovecraft's chilling tales. Players will use the technology offered by the Fantasy Grounds roleplaying engine to follow the trail of clues, make decisions, build their characters, and then apply those decisions in real time to create a crisis in which to confront the monsters and other horrors hidden in the shadows. Horrors Heart is designed to be completed over the course of a few evenings. It includes several handouts, several illustrations, several new spells and magical traps, and source material for the Call of Cthulhu ruleset. The Chronicles of Gilgamesh The Forgotten Age of Giorantha Released on November 21, 2010. Designed for Fantasy Grounds version 2.7.9 and higher. By Michael A. Stackpole and Arvel Martin; Illustrated by Mark Miller. About The Game In the realms of Avernus, Life & Death, Ar, and Maelandra, two ages of history and myth remain. In these, man and immortal monsters have co-existed for untold millennia. The Forgotten Age, in the dark continent of Gioranda, is among the oldest, though few remember its existence. Most of its inhabitants, the first people, are long gone. Among the few survivors of the first age are the races of the Wilds, the Wildkin, living in a continuous state of semi-hibernation. Distant

It has real charm, thanks to its heavy focus on pixel art. Kotakul love the gameplay, which is one of the things that made Superbrothers: Sword and Sworcery so appealing to me in the first place. IGN Back to old school and free from the distractions of modern gaming, Sword & Sworcery brings the spirit of Superbrothers: Sword & Sworcery and Superbrothers: Sword & Sworcery 2 into the world of pixel art and retro platforming. 10BestGames I don't know what exactly this game has done to me, but I'm in love with the game. 10BestGames Akatori has a great sense of humor and is more light-hearted in its approach to a genre of games that generally are more serious. Touch Arcade As well as the iPhone platform, this game works really well on the iPad. It's an absolute pleasure to play, and as an iOS game, it provides a lot of value. Horrorz My heartfelt thank you for presenting the world with such an excellent game. 9BestGames A clever blend of the side-scrolling platforming of Superbrothers: Sword & Sworcery and the pixel-art stylings of Superbrothers: Sword & Sworcery 2. Akatori Amazing game design that feels almost wrong when the gameplay is presented in such an awkward fashion. 10BestGames The side-scrolling action of Superbrothers combined with the pixel-art stylings of Superbrothers 2 combine to create a game that feels so modern and so old fashioned at the same time. Itch Everyone's favorite "Where's Waldo" meets "Superbrothers: Sword & Sworcery" hybrid. When this game first appeared on iOS, it was quite obviously a pixel art game but it would also feature full motion video, just like Superbrothers. For some reason, though, this didn't quite work as well as I would have liked. Akatori Even for a game like this, not all the screenshots should be captured in this way. Thanks to a technique known as pixel art, though, this game is something special to behold. IGN What Akatori: Game of the Knight proves is that there's still room for pixel art games on the iPhone. It's just not what one would expect. XBOX360 Over time,

What's new:

(MMORPG) Evil Henchmen: Siege of Heroes Famous: Once hailed as one of the Sultans of the Sword, Nefir was driven from his homeland and forced to abandon his sword. All that is left of Nefir's life is his family and his legendary treasure. How does your Hero perform in Siege of Heroes? It is well known that vulnerable heroes are natural targets to Sword Knights of Evil. Surprise as a technique requires that the attacker doesn't be guarding. Deny heroes of sweethearts with this technique. Although an important technique, it has a limited effectiveness in some areas. Attack light-weight heroes and make sure to send in minions right away to keep up the pressure. Pick your battles wisely and try to level up quickly. It's better to avoid attacking weak heroes. A Sorcerer? Fine. A Sand Shrine? Perfect. A Bard? Splendid! Fight with the might of Heroes and your outfit's unique flair. Fighting alongside the Heroes and on their side may really benefit Nefir. Use his powerful abilities to aid the Heroes and defeat powerful enemies to make sure of Nefir's rise as the Sultans of the Sword.Q: Programming course for minors Does anybody know of any programming courses online/offline that don't require much more than being able to write Simple Subroutines/Functions and Programs with Loops? The reason I ask is because I'm currently doing a coding course which involves a lot of logic, loops and other difficult concepts. A: Codecademy has a lot of microcourses for beginners, starting with Scratch, HTML, CSS, PHP, Javascript. Scratch is fun and encourages user creation: We want simple to use coding, but also a bit of creativity. We believe coding should be fun and easy to learn. HTML is handy for writing webpages. CSS describes the formatting and style of the HTML webpage. PHP is server-side code. Javascript is client-side code. If you want to learn a language like PHP, Java or C++, Codecademy has a mega-course with 35 hours of video tutorials, each about 1.5 hours long: Codecademy's programming course is all about creating lasting relationships and jobs.

New Zealand! Surprise! Please think about your possible answers when you are solving the puzzles. 4 Difficulty levels: Easy, Medium, Hard, Extreme. The game includes the zigzag/z-intersection method, a method which allows you to find the shape of a puzzle, because some puzzles have to be rotated. This guide contains the answer for each of the puzzles that you can find in the game. Level by level, these puzzles are ordered: - Level 1: Thinking about New Zealand - Level 2: Nature - Level 3: Domains and Facts - Level 4: Cities, Towns and Villages This puzzle guide is not complete, I have to add more puzzles. This is a free app, so please rate it. Download the puzzle collection! If you liked the puzzle, please rate it! I made this app in 2008. I had this idea many years ago, but I just took the pen and paper (yes I write with a pen and paper! What?), It was so easy to make it.. I don't know why I took so long to implement it. The complexity level of the puzzles is increasing with each level. You have the choice between the zigzag/zig-intersection method, and the solving type that I implemented. You have to be careful with the solution, because some puzzles require rotation. Last feedback: - Since the rating of apps are very important for developers, please rate the app if you like it and make it very valuable. For the app store, a 5 and over rating is very good. - Also, give me any suggestion on the app. I will appreciate it a lot! This was an app that I made for myself, because I wanted to learn how to make a game. Last feedback: - I am very happy with the rating of the app. Unfortunately, not so many people gave me a comment about the app, so I have no idea what they think. - I would like to have a comment from you. If you liked the app, give it a rating and make it more visible for other people. This is the first app that I made after playing a lot of Minecraft. I was attracted by the buildings in Minecraft and I wanted to create a collection of puzzles that are connected to that attraction. I don't know how well it works, because I don't like to watch
