Innerworld is a turn-based rpg. There are few games that embrace the turn-based genre like this one does. To see a full-fledged RPG that doesn't abandon turn-based battles is rare. **The Interior Inner world, also understood as interiority, interiority or inner experience, inner experience or inner world, is an experience of soul, spirit, mind or ego contained within a person or a phenomenon. It is sometimes referred to as the unconscious mind, or as the subpersonal mind. Interiority is an integral aspect of first-person experience. The inner world is not a strictly psychological construct, but overlaps with cognitional processes, as well as with emotions, intuition, thought, and perception. It is sometimes also associated with an ego ideal of a person's internal needs, wishes, desires, or inner personality characteristics. The classic evolutionary psychological explanation of interiority is that it is a projection of the unconscious id onto the outer world, directing consciousness by scopophobia or the "fear of looking". Unlike the outer world, the inner world is subjective and personal, as determined by one's ego. The inner world may be considered real by the person experiencing it, or unreal and illusory by the experiencer, who normally never discards it. Interiority is a term derived from the classical terms "interiores" and "interiorum", meaning "innermost" and "inner parts". In the philosophical tradition the inner world is synonymous with "mental" or the mind. For the early Neoplatonists (c.**

**315-c. 300 BC) it was synonymous with the psyche (ψυχή) or the soul, within the boundaries of the human being. For Descartes (1596-1650) and the scholastic tradition of western philosophy (ancient Hebraic and Christian ideas see: achivectics; a priori; apodeictic; a posteriori) it is a cognitive component of the mind, which operates through a process of inference, inference to the best explanation, and induction. In modern psychology it is thought of as the content of consciousness, rather than consciousness itself. As an ontological concept An ontological concept or language is abstract of the structure and existence of phenomena. It is however generally related to mental or psychological states. It may be differentiated from the ontogenesis or genesis of interiorities. The ontogenetic development of interiorities, in this context, is their appearance, absence, or transformation over time. The ontogenetic development of interiorities has in this context to be understood as the constitution,**
