This is a common situation faced by many of us, the application is closed or closed manually. what i need is, I need to scroll through a code which is hard to navigate on the editor's text view. if i had a list of entities and the user wanted to know the text of the particular entity (say a variable) how to identify the entity from the list and locate the particular entity in the EditText? is it possible programmatically? A: It depends what you are trying to accomplish. If you have a large text document and you want to quickly navigate to a specific line of code, you can use a regex. If you have a list of a large number of objects, you might want to use something like Java's tree view A federal judge in Texas on Thursday ordered that the US government hand over a list of government-held phone records related to President Trump's personal attorney Michael Cohen, including phone records dating back to December 1, 2017. US District Judge Kimba Wood said Cohen's attorney, Stephen Ryan, will have access to the records. "Information about the attorneys' contacts with the media is unrelated to the issues in this case, and therefore may not be produced," the judge said in her order. Visit Business Insider's homepage for more stories. A federal judge in Texas on Thursday ordered that the US government hand over a list of government-held phone records related to President Donald Trump's personal attorney Michael Cohen, according to multiple reports. US District Judge Kimba Wood said Cohen's attorney, Stephen Ryan, will have access to the records, including phone records dating back to December 1, 2017. "Information about the attorneys' contacts with the media is unrelated to the issues in this case, and therefore may not be produced," the judge said in her order. The order is the latest development in a case in which Cohen is accused of violating campaign-finance laws and lying to the House and Senate Intelligence Committees about the payment he made to porn star Stormy Daniels in early 2017
