So to stop the boredom, farmers in real life used to play online farming games as a past time. If you are a farmer, there must have been many times that you have played such kind of farming games. This game mod is very similar to the one that you used to play in your farming game. It just has a whole lot of farming animals and can be as complex as you want it to be in case it is beyond your expectation. You do not have to do anything in this game which you can actually do in farming. Additionally, you can create some environments or you can even add some crops as your farms or you can even add some new items and sell them to other farmers. There is no time limit set and

Whyte's Charge Lands at Overbrook The Overbrook dietetic practice purchased the downtown office building at 601 N. Duke St. from MacBro, which is being converted to the Hilton Springs boardwalk. Overbrook will move to 522 N. Duke St. in the same building, which it shares with the Scottish Rite Medical Center. Overbrook's physicians plan to concentrate on nutritional counseling in the new space, which has more than 30,000 square feet. Land and building costs are believed to be approximately \$2 million. "We see the need for a newer, better-equipped practice," said Paul R. Whyte, who joined the practice in 1985. "I think we do very well. We've survived in this market by being average." Q: Improve this first order dynamical system Find the general solution of the differential equation. $x' = -2x + y$ $y' = -y$ where $x, y \in \mathbb{R}$ I solved it on Wolfram and got $x = y + c$ but I don't think its correct

since the problem states that $x, y \in \mathbb{R}$. Any help is appreciated. A: The general solution of the system is: $x(t) = \frac{1}{2}(y(t) - x(t)) + c_1$, $y(t) = y(0) + c_2$ Notice that the general solution is a superposition of three homogeneous solutions. You can clearly see that this is also the general solution. By solving the homogeneous system you can find constants c_1
