Q: Accessing the "Full path" (Windows file path) of a project in VS2005 Is there any direct way (not using 'Directory.GetCurrentDirectory()' and 'System.IO.Path.GetDirectoryName()' ) which would help me to find the full path of a project

(our solution) in Visual Studio 2005? A: You can use MSBuild, either at build time or at run time: MSBuild's command-line utility MSBuild.exe The documentation refers to MSBuild 1.0 or higher, but the newer version even handles subdirectories. It is extremely easy to use, and would likely be a very fine solution to your problem. MSBuild does not provide easy access to the build tools in Visual Studio. Instead, Visual Studio uses MSBuild when you build a solution or project in Visual Studio. In Visual Studio, you access the build tools using the 'Build' menu or by using the build tools window (Figure A). The Build menu/toolbar is called MSBuild, and can be opened from the menu View->Other Windows->Build. Alternatively, you can call it from within the visual studio interface, by using Tools->Import/Export Settings->"Import specific settings for this solution"/"Import specific settings" and selecting your solution. The information is located in the.sln file, or.proj file of a project (as appropriate). The.sln file looks like this: 6d1f23a050
