Analytical expressions for steady state and linear response capacitance of solid-state supercapacitors from Nernst-Einstein relations. We derive analytical expressions for the linear-response capacitance, the internal resistance, and the activation energy of solid-state supercapacitors, from the Nernst-Einstein relation. The asymptotic expressions for the well-known model capacitors, as well as their corrections, are obtained. These relations can be applied to supercapacitors such as metal-oxide-based pseudo-capacitors, which show both electric double layer capacitance and electrical pseudocapacitance.

Q: How to return a Promise object in JavaScript I am using a Promise in Javascript to call an API which will return a list of entities (a list of items) with a certain key. The Promise is implemented as follows:

```
function getData(key) { return new Promise(function(resolve, reject) { url = " var d = 'hidden' $.ajax({ dataType: "JSON", url: url + key + d, method: "GET" }) .done(function(data) { resolve(data); })
```
