Relational database In the computer science field of database management systems, a relational database is a database system in which the data are presented in relational tables, organized in rows and columns, and that uses a relational model for data representation and querying. Many of the database management systems originally developed in the 1970s were "procedural" in that the "objects" of the database were programs. Such systems were quite slow and memory hungry. This led to the development of data structure for relational database management systems, particularly the relational model. The relational model was developed by E. F. Codd at IBM in the early 1970s. It is a conceptual model for defining and querying data stored in a relational database. Its motivation was to overcome two flaws of previous programming-based data management systems. First, they could be c6a93da74d
