After using Sonar for a year-and-a-half, I'm not running around getting rave reviews for the program anymore. I think Cakewalk has done a great job with Sonar X3, and I look forward to spending more time with it, and reviewing it further in the future. Here's the bottom line. I want Cakewalk Sonar X3 to beat out all other recording apps. I want Sonar's workflow features to trump all of the program's rivals, whether you're taking a video or audio clip, or working on a track. I want whatever's in the program to be intuitive enough that I'll never get stuck, but deep enough that I'll never run out of ideas. It's a heavy, expensive package, but I wouldn't feel that way if Sonar has some of the features and tools that a newer, easier to use program should have. First, a brief recap: Cakewalk's venerable sequencer has been around for more than 25 years. It was originally a solid competitor to Voyetra Sequencer Plus Gold for DOS this a couple years before the first Adlib and Sound Blaster sound cards appeared. Later, Cakewalk brought it into Windows 3.1, followed by Windows 95/98/ME versions that added digital audio recording. Then, back in 2001, Cakewalk began with a clean sheet of paper to produce SONAR, a more advanced DAW that looked a lot like the old Cakewalk but had a brand new recording engine. This, Cakewalk has steadily refined, with new SONAR versions appearing almost every year. SONAR X3 is the 11th major version of the program since then alone! One of the best things about SONAR is its lack of copy protection. Cakewalk lays down some rules mainly, that you can't sell or transfer the software, which is something you can do with a few of its USB dongle-based competitors. But the lack of a dongle means you can use the software on a laptop or even an ultrabook like the Aspire S7 without fear of breaking the dongle off or losing it, or otherwise having to put up with ridiculous authorization schemes. And since many laptops have only two free USB ports, you can keep them open for, say, an audio interface and a MIDI keyboard. There's no challenge and response system, either; just install and go.

3. Run Dimension Pro, exit, and hit W to close the program. Then, reopen Dimension Pro to make sure it completely uninstalls. You may need to also restart Windows. Note: It is possible that Dimension Pro will ask you to reboot as part of its uninstall. Once Dimension Pro has been completely uninstalled, you can then install the full 1.5 (or later) Dimension Pro installer which includes a SONAR X1 Producer version of Dimension Pro. IMPORTANT: Do not install Dimension Pro from the un-cracked Dimension Pro 1.5 installer! This is a bad idea; it does not include the SONAR X1 Producer version of Dimension Pro. It also doesn't apply to the SONAR X1 Producer 5.6 beta! To install, simply extract Dimension Pro 1.5 to any folder and then double click on Dimension Pro.exe or DimensionPro5.exe. You will need to restart Dimension Pro, but you won't have to install the VSTS-XXXX plug-ins to use the program. The fifth release of the SONAR X1 Producer, Cakewalk's music production software for Windows, sports brand new features, a new interface, support for ARP and Sample Logic's SD/XML format, a much improved audio routing system, and, of course, a wealth of improvements to MIDI effects and routing, all housed in a single 64-bit and 64-channel Windows application.

These new features include: All of the VST and VST2 plug-ins in Sonar are compatible with SONAR X3. It features a browser interface, and offers a wide range of plug-ins. For example, a plug-in for stripping VST audio inputs is included, along with a number of high-quality effects processors. There are three host formats: WMA, MP3 and WAV, along with several MIDI sources and several host formats. Cakewalk's DAW has a very clean and appealing interface, with two-channel audio monitoring on the left (hence the X3 name) and a large tabbed areas on the right, with panel selection at the top. Choosing one of the twelve main panels strips off the strip at the top that usually displays panel buttons, and it's here that you'll find the browser interface. Under the artists and the staff, depending on the size of your panel and the number of VST plug-ins you have installed, you can see a list of plug-ins and categories, including 'Apps' for VST, VST2 and VST3 plug-ins. 5ec8ef588b
