
Mbox 2 Mini Driver Windows 7

hi, i have a mbox 2 mini and it used to work fine, everything was good, but a few days ago i couldnt find the usb cable for it on the back of the mbox 2 and when i plugged it in it no longer worked, it wont even show up in device manager, and when i try to do a device manager scan it comes up with the following error: "the hardware device is not functioning properly. no drivers are loaded for the hardware device. see the documentation for your hardware device. (code 31)" i have been trying to fix this for days. ive been looking on the net for a fix and have tried loading the drivers, unloading them, using the install disk, and nothing works. please help, im running pro tools le and it used to work fine for a few days then all of a sudden it wouldnt work, i tried everything and i cant get it to work, ive tried everything hello, i have a mbox mini and i have no sound, and no way to get sound, and my midi controller isnt working. i tried to update the drivers and that didnt

work. i tried to change the ports and that didnt work. i tried uninstalling and reinstalling, and that didnt work. when i plug it in, it doesnt show up in device manager. i tried the uninstall for pte, and it didnt work, but when i did the scan, it wouldnt show up. please help, i would really appreciate it! i cannot get the mbox mini to work in pro tools. i have a brand new, unopened copy of pro tools 8.0, and the mbox works fine in ableton live. it detects the hardware properly and lets me use it as an input. however, i cannot get it to work in pro tools, and i am having a difficult time finding help. can you help?

Mbox 2 Mini Driver Windows 7

i have a mbox 2 s and i use it in a small studio its almost always worked fine. in no time i had the same problem i get no audio and i got a upply on the box. i tried many solutions but nothing worked. i have a gigabyte motherboard so i thought maybe is a driver problem. i updated my windows and installed new drivers and nothing changed. my soundcard works fine but this is not the case with the mbox. the orange light still is on. i have the mbox 2 pro and it works fine. i am using pro tools with the original cables, a behringer x32 mixer and a pair of shure sm57s. i am running windows 7 ultimate 64-bit. i have no problems. i recently purchased a pair of ears monster hmm50s, and the mbox 2 pro will not recognize them. the ears dongle will work fine when i run one of my dongles, but the mbox 2 pro will not recognize either of them. i have tried the usb firewire install option from the mbox, and that is the only option that will allow the mbox to recognize my dongles. mbox 2 mini driver problems.. windows 7 i have a mbox 2 mini i use as a sampler. its a 2 channel mini that has fx and a stereo in/out on the back. everything was working fine but i just got a new machine with windows 7 and pro tools. it will not recognize the mbox as an input. ive tried multiple usb cables, i connected to a mac and it detected it. i have tried using both

usb 2.0 and usb 3.0. i have the drivers installed and set up correctly. i have also looked at my firewire settings in the firewire pane of the control panel and they are all set to firewire 400. i have tried switching the firewire port setting but that didn't help. i have also tried changing the name of the device to something else and set it to exclusive use with the mbox but it didnt help either. please help i am at my wits end and cant figure out why my mbox is not working. it worked perfectly fine in windows xp and my mac. 5ec8ef588b
