this tool can mirror the original gameplay experience on the playstation and supports a broad selection of enhancements comparing to the gameplay on a traditional playstation 2. in order to play games on your computer you need to install ps2 bios pcsx2. users have the following benefits: usp spectrum emulator is touch screen compatible, shows a full library of games and apps that the emulator will download from vtrdos.ru, worldofspectrum.org, rzxarchive.co.uk and bbb.retroscene.org and runs almost every game i have looked to play on it. zesarux. funny name but awesome spectrum emulator. emulates every version of the spectrum computer ever made or imagined, including zx next, zx uno and jupiter ace. also emulates amstrad cpc 464 and sam. option to build a custom emulator. want better graphics and sound option for this too. see it in action here. linux app to install zearux here. needn't to be a part of retroarch. just download one of the mame update packs and install it. then add the latest version of retroarch to the mame menu of your ps3, click on 'download' and wait a couple of hours. a download link will appear in the retroarch console. all you need to do is to add the game's rom to the retroarch rom list. if you don't have retroarch yet, see the retroarch home page. mame is a complicated project. it's huge, and growing bigger by the day. the large number of people involved in its development means that new people are always being added to the team. these people are responsible for testing and fixing bugs, improving the emulator, and adding features and fixes. for this reason, mame updates are not very stable. this means that you should download the latest update pack only if you are prepared to use the emulator in a "beta" state. it's your responsibility to try out this beta state and see if it's stable enough for you. if it is not, then you can either uninstall it, or wait for a new update pack.
