
Wifi Cracker

V4.62

Freedownload

PORTABLE

If you look around <http://wifitools.com> for other WIFI hacking programs you will come across several programs like WIFI MITM, WIFI Cracker, WIFI Remote, and WIFI Firewall. While WIFI MITM and WIFI Remote offer some kind of “local” ad-hoc mode in which you can inject a EAPOL message to a victim who picks it up and dials out, WIFI Cracker is software that hooks into the hard disk of your computer and actually keeps monitoring the packets for a period of time before cracking the information and dropping it, by injecting a packet in with malicious payload that could just as easily be a code that causes the computer to run a malware detection program, if not use a random payload to get around antivirus detection. As said earlier, both the programs are free and are available for download from the site you mentioned. After downloading the software, start the installed application and start the trial period by clicking on the big “Start” button. Please note that both the programs are “legally freeware” that is you have the full rights to them; if you decide to purchase the software, don’t forget to notify WifiCracker to this fact, otherwise you’ll have problems. OTW : yes backtrack 5r3.! on VMware player!... but m not sure tht its installed properly.... becok after installation..wen i opened it.. there's a install backtrack' button located in the left side corner of the screen.... but stil m able play with the places, system n root... etc.. n one more thing.... can i do wpa2-psk wifi hacking without an external wireless adapter... i mean using the built in adapter... i think it detects my internal built in wireless adapter... but i cudnt get it enabled... this is so overwhelming :(... help me out pls...!
