AudioCDburner is a small software solution that can help you create your own custom music CDs. This burning application comes in handy for all those who want to create audio CDs with minimum effort. The user interface is really simplistic and you should get used to working with this program in no time. You can also change the look of the program by selecting a theme. As opposed to other advanced burning tools that are fully-featured and can create various projects, AudioCDburner can solely create audio CDs. Hence, it doesn't come packed with other features such as erasing re-writable discs, enabling text mode, creating ISO compilations or setting audio parameters (e.g. channel, volume, audio codec). Unfortunately, the app supports a single file format (WAV) and it doesn't allow you to drag and drop the files into the main window. AudioCDburner displays information about the songs such as file name, length and type. The items can be removed or arranged in the order you want them to appear by moving them up or down. It is also possible to preview the disk usage and to pick the media size. The main window is minimalist and it doesn't bundle any configuration settings. This could be useful for all those who want to burn music data on the go without being coerced to deal with many settings. The bottom line is that AudioCDburner is a small but efficient application that can burn audio CDs quickly and effortlessly. It's easy to work with and light on your system resources. Thanks to its overall simplicity and clean layout it appeals to both beginners and professionals.
