CoffeeCup Image Mapper Incl Product Key Free (April-2022)

CoffeeCup Image Mapper is an advanced tool with approachable options to help you create HTML image maps from graphics files or image maps embedded in HTML files. It supports GIF, JPEG and PNG formats as the source. Getting started At startup, you're welcomed by a wizard which offers to guide you through indicating a graphics file, map name (unique if you plan multiple map files within an HTML page), and default URL to direct users to when clicking outside the defined area (optional). Design image maps with drawing tools The main application window contains two panes for design and preview. You can draw, move, resize, copy and delete image maps in the shape of rectangles, circles or polygons. The map image can be replaced with another one, provided that it has the same width and height. It's possible to zoom in and out of the design, use a vertical and horizontal rules for accuracy, view image properties (file path, type, size, color depth), edit map settings regarding the name, default URL and target, as well as modify area details when it comes to the name, URL, alternative text, target, mouseover text, and shape. Preview, test and export image maps The resulted project can be tested in the preview pane, where you can click the designated areas to attempt and launch URLs in the web browser. This can also be done by launching a web browser from CoffeeCup Image Mapper. The project can be saved to file and later resumed, as well as exported as a responsive or non-responsive image map (CMAP format). Concerning app preferences, you can change the display colors for the default, mouseover and selected areas, pick a favorite web browser, or hide the startup wizard from every program launch. Evaluation and conclusion It's wrapped in a user-friendly interface with a design and preview pane, and it has intuitive options for users with no experience in web design. CPU and RAM usage was low in our case, and projects were swiftly exported. To conclude, CoffeeCup Image Mapper facilitates a simple means for beginners to design, test and export HTML image maps to integrate into websites. Go Photo Downloader is an all-in-one, easy-to-use, powerful and fast online service that lets you download pictures from Facebook, Twitter, Tumblr, Instagram, Flickr, Google+ and Email and convert them into various formats as you like. Users can download pictures online directly from these popular services
