KeyMACRO is a simple instant messenger for exchanging messages between people. KeyMACRO is an instant messenger application that works on the Windows platform and offers the following features: you can send and receive messages; use the regular keyboard and mouse to type messages; you can use either your telephone or headset. Social Networking: What are Social Networking Tools? Social networks are services, software or websites that people use to connect with each other. Social networks include specialized websites that help people keep in touch and share information and ideas, such as Facebook, Twitter, and LinkedIn. Social networks offer a variety of features and functions, including sharing content, posting status updates, connecting to other social networks, and adding friends. Social networks allow users to connect with other people through the use of user profiles and online services. Typically, each person's profile is represented as a web page and is used to keep in touch with friends, family, and others who know them. These pages can include a person's name, interests, events, and other information. Social network profiles are often used to create a web presence for individuals, companies, and other entities. Social networks also provide various ways for users to interact with each other. For example, users can communicate with each other through instant messaging, social chat, email, text message, and social comment and other functions. The most popular social networks allow users to share information, express themselves, and interact with other users through the use of specialized, free websites and mobile apps. Why do Social Networks exist? Social networks have been around since

the early 1990s. Before the term "social networks" was popularized, computer users had a variety of online communication tools, such as online forums and chat rooms, which allowed them to communicate with each other using text. However, as technology advanced, the ability to communicate using text became limited to individuals who had access to online text-based services. As the number of individuals with computer access grew, new services were created, such as websites and instant messaging programs, that allowed users to communicate via video, audio, or more advanced communications such as emoticons, that were not possible using text-only services. Social networks allow individuals to communicate using social media such as social bookmarking sites, Twitter, YouTube, and other social networks. Social networks are an effective way to communicate because they allow people to connect with others who share their interests or who are otherwise important to them. Many users choose 2edc1e01e8

Crown IM is a lightweight instant messaging application that helps users send messages to their friends whether they are online or not and manage chat rooms. A new account can be created by giving details about name, gender, nickname, password, location, email address, and age. Plus, you can select a secret question and answer for future authentication issues. Crown IM sports a clean and straightforward interface that gives users the possibility to add new friends to the list, customize the text messages in terms of colour and size, choose between a wide range of emoticons, and copy the information to the Clipboard or print it. What's more, you can introduce timestamps into conversations, save the current settings as the default ones, perform basic editing operations (cut, copy, paste, or delete), as well as send files to other users by using the built-in browse function, so you cannot rely on the "drag and drop" support. Other important options enable you to chat with your buddies using a webcam and microphone, join various chat rooms which are organized in categories (e.g. music, art and entertainment, religion and spirituality, shows and events, ethnic groups, education, games), or create your own chat rooms by specifying the category, subcategory, room name, admin code, rating details, welcome message, and lock code. Just like any similar instant messaging application, this tool allows you to select the status (e.g. online, busy, phone, away) or add a custom message. There are several configuration settings designed to help you make the program run at Windows startup, save the position of the window, save and archive all messages, disable alert sounds, create a list with users to be ignored, and set up the webcam and audio parameters. All things considered, Crown IM offers a handy set of features for helping communicate with your friends, and join or create chat rooms. Thanks to its intuitive layout, it is ideal for beginners and professionals alike.
