DClearSystem is a straightforward Windows application that does not require configuration to clean up your disk space and optimize your PC performance. It's a convenient way to reclaim a lot of disk space without having to deal with complex configuration settings. When run, DClearSystem accesses your system registry to remove all system backups and uninstallers created by Windows Updates, as well as temporary files and Internet cache. It also removes the boot folder from your hard drive, just in case, to prevent any further access to that space. After executing the tool, you can check for any unsaved changes by pressing the Start button. The application is closed automatically. The application is

not malicious and is completely safe to use. No system performance issues were encountered while using it. Some users may report not finding the application in the Programs menu or the Start menu. That's because it's stored in your collection of portable software. The software tool can be scheduled to run automatically on your system using the Task Scheduler utility. It's also a good idea to run it on a daily basis. DClearSystem was tested on Windows 7, Vista, XP and Windows 10 with mixed results. You can download DClearSystem from Softpedia. Does the System Restore's "Save and Replace" feature actually work for the same partition? You should ask your administrator to enable the option "Save and replace the files on the partition with the backup". The description that you can

restore only your system files, and not the entire partition, is not so easy to understand, because it is not clear what is the impact of the different files that will be overwritten by the "Save and replace". Has anyone tested this option? What I would like to know is if this option works. I have a dual boot system, one Windows installed on a SSD and another Linux installed on a HDD. Now I need to reinstall the windows, but I'd like to use the same boot partition, in order to avoid that I have to start the computer with the Linux installation CD and select a different boot option. I don't want to create a new partition because I have some important data that is currently located on the Linux partition. The problem is that the hard drive is too full, so I want to empty the Linux partition and then create a new partition that will be used by

the Windows installation process, but I would like to keep the old Linux partition so I don't have to reinstall everything. A: Try using

**What's New in the?**

DClearSystem is a handy solution that cleans system space efficiently by removing unwanted and unrequired files. With the help of this app, you can easily free up hard disk space by cleaning all the junk files that accumulate when you download and install

programs or change system settings.

Creator, Publisher: Barracuda Networks

License: Freeware File Size: 1.8 Mb Date

Added: 04/06/2004 File Extension: .bk

Operating System: Windows 2000, XP, Vista,

7, 8, 10 Commercial Link: Old File: 1.0

Price: Free Publisher's Description: Quickly

free up disk space with this simple

application. Do you often find yourself

staring at dozens of unnecessary files on

your disk? The reason could be that you've

not yet got the time to delete them. In such

situations, you might try to free up some

space on your drive by using the uninstalling

features of your browser. But this may cause

some nasty consequences. One of the major

components of a computer that is commonly

lost is its temporary files. Such files are

created by most applications or by the user

himself during the use of a certain program. These files are normally ignored by the operating system. However, due to the fact that they occupy a certain amount of disk space, it is not a bad idea to clean them away. Luckily, this can easily be done using the CCleaner program. This program is a light weight tool that allows you to quickly regain the necessary disk space. It provides various removal options for files that belong to other applications, as well as temporary files. At first, you need to run the application. Then, from the main menu, select the Clean up tab. There, you'll find several options like temporary files, records and cookies. By using the application, you can easily clean out temporary files of your browser. This way, you can get a better performance of your browser. The

application is also capable of removing temporary Internet files, which are often caused by the installation of certain programs. After the cleanup is finished, you can close the program. Now, all that is left is to check whether the disk space was reclaimed. So it's kind of confusing.. there is no way to uninstall this crap, but to add it to your "add/remove programs", "blocked programs" and "search programs" 1) It says that it will remove it (as if it were a removeable program) 2) When it's not actually being removed and goes back to the checkmark, it says that it's only added 3) If you are just browsing/looking at it,

## System Requirements For DClearSystem:

OS: Windows XP (32-bit) or Vista (32-bit or 64-bit) CPU: 2 GHz processor (or better) RAM: 2 GB (or better) Video: Microsoft DirectX 9 compatible video card Hard Disk: 20 GB The following are the installation requirements of the DVD2Go Player:  
DVD\_PLAYER\_SUPPORT\_ISO.PDB  
DVD\_PLAYER\_SUPPORT\_USAGE.PDB  
DVD\_PLAYER\_SUP
