Hayao Miyazaki and Studio Ghibli's latest movie, "How to Train Your Dragon 2," is more of a 3D animation than anything. But there is something to be said for an animated film that has no digital effects. The movie still looks good, but you can tell it is an animated film. The picture quality is the same as any other Ghibli film. It is not a crisp, holographic-looking picture, but you can still see the details. It looks and feels like a true story, a journey of a young Viking boy to save his island home. I look forward to this film. But one feature is missing from the film, and that is the little bits of life you see in some of the film. The characters are so well animated that it is easy to tell where their limbs end and where their faces begin. But that is not the only problem. Unlike the Dragon Quest movie, which did not have a word of dialogue, this film has dialog. The problem is that the dialog sometimes sounds more realistic than the animation. When the characters are talking, the sound effects sometimes seem to come from real-life sources. It sounds like someone talking to you as if they were right next to you. "How to Train Your Dragon 2" is not the only movie with this problem. Last year, the release of the video game "Grand Theft Auto IV" also used sounds from real-life sources when the characters were talking. It was not a big problem in "Grand Theft Auto IV," but it could be very distracting for the viewer if he or she was not expecting this effect. So far, we have not heard of anyone complaining about this movie because it has not come out, but if this problem is happening to you, you may want to put up with it for a couple of days. Otherwise, it may be time to watch
