Full Image Info (and Full Image Info Pro) are a powerful and comprehensive program for analyzing and retrieving information about digital images. Full Image Info can retrieve information from many common image formats and from many popular camera models. Full Image Info is useful for more than just retrieving image information. For example, the program can rename images using any of the thousands of available images and the retrieved information can be used for file compression or extraction. Full Image Info can parse EXIF, IPTC, and many other image formats. There is no need for third-party software to view images or retrieve information from them. Full Image Info has built-in viewer and extraction functions to display and extract the retrieved information. Full Image Info comes with a versatile set of tools to browse, sort, analyze, and extract information from images. The program can parse EXIF data from TIFF, JPEG, RAW, PSD, or any other image format. Full Image Info can extract all supported IPTC information, including title, caption, keywords, and more. The program can provide a summary of all the extracted information and export it to a variety of other formats. Full Image Info can handle very large images without slowing down. The program's features include batch processing, the ability to display images in BMP, GIF, JPEG, or PNG formats, EXIF or IPTC parsing, file compression or file extraction, information retrieval, file renaming, print output, and the ability to view color histograms.
