creating a directory while under NT 4 with a subdirectory named "system32" e.g. "c:win2k\system32". Then copy the following files from a Windows 2000 CD-ROM or the winnt\system32 directory of a Windows 2000 installation to the system32 directory you created:

`NTFSCHK` has finished, you will see a directory with a subdirectory named

"uninitialized" in the directory created on NT 4. Copy the "uninitialized" directory to the C:\ directory on the Windows NT 4 system and run CHKDSK on the NT 4 directory. CHKDSK will now run on NT 4, and you can continue your work.
