(I have an up-vote for this answer, if someone finds it easier to understand than the accepted answer.) I am attempting to understand the proof of the following statement: Let $A \subset \mathbb{N}$ and $B \subset \mathbb{N}$. Let $X_i \in A$ for $i=1,2,\dots$ be i.i.d. random variables. Let $S_n = \sum_{i=1}^n X_i$ and $\mu_n = \mathbb{E}S_n$. Then $\mathbb{P}(A \cap B = \emptyset) \leq \frac{\mu_n}{\mu_n + 1} \mathbb{P}(A) \mathbb{P}(B)$ where $\mathbb{P}(A) = \mathbb{P}(X_1 \in A)$ and $\mathbb{P}(B) = \mathbb{P}(X_1 \in B)$. I think I have proved this statement when $\mathbb{P}(X_1 \in A) = \mathbb{P}(X_1 \in B) = 1$. However, in the general case I am having some trouble figuring out how to properly understand this statement. Here is what I have been doing so far:
$$\begin{aligned} \mathbb{P}(A \cap B = \emptyset) &= \mathbb{P}(A \cap B) - \mathbb{P}(A \cap B)^2 \\ &= \mathbb{P}(A) \mathbb{P}(B) - \mathbb{P}(A)^2 \end{aligned}$$

EsBackup

ESBackup is an open source package of programs that helps you automatically backup your computer, and enable recovery. It includes backup settings for the most popular applications from EsSoftware. Backup settings include Computer settings, Windows settings, Registry settings and application settings. ESBackup uses System Restore to automatically find recent settings backups for the applications you want to restore. Backup settings contain the same settings that are used to restore the program settings back to a working system. Restore is the same as creating a System Restore point. ESBackup is an open source application and free for personal use. It has support for Windows XP/Vista/7/8 and Mac OS X. It is 100% Free and Multi-Platform (32-bit and 64-bit), so it works on all Windows Operating systems. If you are looking for a more detailed review please click [here](#). This is fine for those apps that are basic, but it doesn't make sense to have a task manager with all those features in the first place. Even if you can get that to work, they probably need more work, and then you need even more features, and so on. Instead, I'd suggest adding the features you need, instead of adding features you might need later on. This review was published before iOS 10 was released. Since then, it is possible to release a third party app that does what the stock app does. Control Center For iOS 10, Apple introduced their own control center in iOS, which is what some people call their lock screen, but I have already discussed that before. Control Center has a few features that you will appreciate, and also some features that are annoying, but necessary. It is accessible by swiping up from the bottom of the screen, and also by pressing the side button. Control Center Swiping up from the bottom of the screen brings up the control center, where you find a few things. First is the volume and brightness, and if you want to adjust them, just tap and drag. Volume adjustment should be available, but you can turn off the sounds if you want to. Losing and restoring apps are available from the app switcher, and the menu that appears is self-explanatory. Apps you use often are displayed in the home row, so they can be accessed easily, as
