To install Adobe Photoshop, you absolutely must have a valid serial number. Without it, you can't use the full version of the software. The serial number can be purchased, but the cost is usually high. So, if you already have Photoshop, you can use your old serial number to activate the full version of Photoshop. To use your old serial number, you can either go to the Test Center and purchase a new serial number or you can go to the My Account page and activate your old serial number. You can also turn to Adobe's Support Site to find the serial number of your machine. You will need to install the Support Site on your computer and then you can enter your serial number there. If you do use the Support Site, be sure to back up your files before proceeding. You may also want to use a different password for the Support Site so that it does not override the original password for the Photoshop software.

Summing up, Adobe Photoshop CS5 is a capable image editing tool, although it is not without its flaws. I have been a long-time user of Windows-based software and have enjoyed the features that its creators incorporate. The Quick Fix tool, for example, is excellent not only for removing unwanted objects in an image, but also for removing red-eye and enhancing photos. For those inclined to use Photoshop for their picture-editing needs, I would recommend it, but I am afraid that for those who want a quicker, more streamlined, and easier editing multi-tasking system, Adobe Photoshop CS5 is an ever-present no-brainer. No doubt, Photoshop CS5 will be an ever-annoying work-horse, and I am sure that there are improvements to be made, but if you want a comprehensive, and multidimensional software but, nonetheless, need to edit photos and create visual masterpieces on the go, Adobe PhotoShop CS5 is still the tool that is best suited to the job. Products may be similar, but features and functions are there to be compared so you need to do it yourself. AirBrush is one of the neatest apps of its kind. The idea to create a multi-touch painting tool that works with the Apple Pencil or the pressure sensitive Apple Pencil is worth highlighting. But it wasn't enough for me to simply like it. It needed to be super intuitive, easy to use and above all, fun. AirBrush achieved that. It's also a cross-platform app that works with Windows, macOS, and Android platforms. It costs $1.99 for Adobe Photoshop CS6, Adobe Illustrator CS6 and Adobe Mobile apps.
