Can I just say how much I love Lightroom? I use it all the time, on all my media, from all my cameras, the OS X cameras are all the same, no problems there. Then I was diagnosed with multiple sclerosis (I am a photographer) and started using more than one computer a lot, and I can hardly count how many computer problems created, but Lightroom is certainly a viable solution for me. I've been using Photoshop since version 2 and Elements since version 4. It never ceases to amaze me how much functionality has been added to the software over the years. Bitmap corrections (eg. and dodge, burn, etc.), automated toning and bleaching is a great example. There are many easy to follow, brilliantly written tutorials on all aspects of the program, the new tools introduced with 6.0 are extremely useful and add a lot to the collection. One of my favorite new tools is the Brush Selection tool which allows you to select multiple portions of an image, which can then be individually adjusted, copied and pasted etc. I would have certainly purchased this on its own, but it goes along so nicely with the other features. The whole package is very user friendly and very intuitive. I am using Adobe Photoshop for photography, graphics, web design and photo editing. Using Lightroom for my raw files and making backups of my raw files using Adobe Lightroom - Import, format and backup all my photo projects together. It is by far the best photo software on the market.

There on day I own it. Has been my favorite photo software since I started with it 10 years ago.

To me, one of the best parts about using Photoshop is the fact that I'm working in a version of Crop

tool that doesn't feel dated. The Photoshop Camera interface belies just how much had and had been done to make it a perfect fit for a modern web experience. When I first started using Photoshop, the look and feel of the interface seemed confusing. Looking back, I think that it was confusing at first because Photoshop understands and can leverage many of the new techniques that are transforming the web today. This includes developing for the web with the latest web technologies. Photoshop is designed to give you complete control over your entire canvas. From the beginning of your work, there are no guidelines or restrictions that need to be followed in order to make your work look professional or proper. You can come as far as you want, whenever you want, with Photoshop. We believe that we've created an amazingly easy-to-use mobile camera app that also happens to be a tool like Photoshop. It's a stand-alone app that lives within the Photography app that almost anyone can use. It's embedded in the Photoshop app through a feature called Creative Cloud Libraries, which lets you easily share Creative Cloud Libraries with other people. And, once you've started, nothing blocks you from switching to Photoshop or other apps. As you know, Photoshop can be used in a variety of ways. Some people use it primarily as a thumbnail browser. I prefer to use it as an image-building tool. The reason for this is that I rarely use it for final images—really only as a way to pre-pick Photoshop actions and create project files. Since I shoot JPEGs and RAWs interchangeably throughout the year, it is very important to have all of the image-building qualities of Photoshop at my fingertips. This includes the screen resolution, image size, bleach-free cropping, and so on. e3d0a04c9c
