The last time I used Photoshop was CS6. I really liked CS6 because of the number of options you have you have to make things in Photoshop and the fact that you can easily make adjustments in normally "dark" areas such as the shadows. That being said, I was kind of shocked to find out that you can't even make very basic adjustments in CS7. I don't mean anything to do with colour or printing, but basic adjustments such as straightening and redrawing a line. I don't see why this shouldn't be possible because it should be very easy to do. I don't really need the undo feature that you realize you need once you screw up. Hello, I am a new user to the website. I just wanted to say that I really enjoy this site. I had been a user of PS for donkey's years and with the photoshop CS7 it is incredibly painful to use as I can not implement the tattoo mesh however I thoroughly enjoy the site. While I love the new instagram filters, I wasn't really fond of them at first until I realized that they're here to take advantage of the new features of Photoshop CS7 were brought out to benefit for design of web and other platforms. I've never been able to learn the complicated software, so this was both a long and tedious process for me. Even after I started to use it for personal projects, it was still frustrating. But now that I've mastered this program a little bit better, I do not have to go to different programs anymore since all I need to do is to edit my photos in Photoshop. There is also the possibility to move your projects on there own handycloud, which is what I've decided to do with this program.
