The PSD file format is essential to the digital photography community. It is the native file format for Photoshop and its competitors, and it is how most images are exported from tools such as Photoshop Lightroom and Aperture to mobile devices and endless websites. Well-known photo contests such as the World Photo Awards and the World Press Photo are held in PSD format. Anyone who tries to use an image from a contest in a new image and publish it will see that the image has a watermark on it. That's because images are judged in their file form, which is how they are saved in PSD.

Photoshop has never been a single tool. It's a well-rounded suite of creative and productive software that includes bridges for scanning, layers, graphics software for drawing and 3D modeling, and powerful filters for enhancing images. Adobe's slogan is "Information Management in one tool", but professionals will appreciate the features that run beyond the basics. Possibly one of the most mind-blowing new features from Photoshop for the year ahead is the introduction of Neural Filters. It's actually a new workspace within Photoshop with filters powered by Adobe Sensei. Equipped with simple sliders, you can make magic happen such as changing your subject's expression, age, gaze or pose in the time it takes you to say "AI technology". To access Neural Filters head to Photoshop, and choose Filters > Neural Filters. Adobe's HDR technology makes it possible to reproduce very high dynamic range images with more picture information. With this new feature, you can create images that have more gradation than any other available technology, and you can create images that are simply impossible to achieve with any other types of cameras. You can also create black and white images even in high dynamic range like HDR. Also going to be a huge addition is the new Camera Shake Control that is going to transform your photography for good. If you shoot a lot of photos and don't edit them, you may feel like you are having difficulty when editing your images. But at the same time, if you were to edit your photos and you don't switch back and forth between the image preview and the final resolution and do some vital edits, it would be a lot more difficult. With the new Nikon photography app, you can turn your clicks into amazing photos from within Photoshop, right from your camera and on the go. This new feature is a gift and most definitely worth the purchase.
