2.8284.Q: How to put hyphen between root and parenthesis in a CSS selector? If I want to apply some styles to a particular node in a HTML file, I might have something like this: `html > body > div#id > table.class > tr.header > td.last > a.last`

{ The problem is, I'd like to understand in the CSS which rule is applied to this tag, but I don't know how to express what's there between `html`, `body` and `div#id`. I tried to put a - sign between them, but it didn't work. So, is there a way to make it work? A: When you have a valid selector which begins with an HTML element, you can do this: `table.class > tr.header > td.last > a.last` {
