yousef was a hacker featured in the notorious and widely published last resort magazine. this profile led yousef to become one of the most sought after hackers in the underground community. yousef is skilled in breaking into traditional, highly secured firewalls by using 0-day exploits. he is also a white hat hacker, known for his work exposing hacking groups and ransomware threats. yousef was expelled from the previously mentioned last resort magazine due to the use of stolen credit card data from their victims. he was also a member of the controversial and widely published anonops.yoyoz, a group of hackers who allegedly committed a number of cyber crimes as well as directed and orchestrated others to commit attacks against a number of targets including journalist glenn greenwald. brute-forcing is fundamentally simple to set in motion. however, it is nonetheless used and powerful in the real world by thieves, hacks and malicious criminals. for example, in the course of a bruteforce attack a hacker makes use of a dictionary of nearly every commonly used word, and a list of every possible string of characters used in a login brute-forcing (also known as dictionary attack) can be done with or without a word list. the brute-force attack can be expanded to brute-force all of the words in a dictionary and, if there is a more efficient way to do the attack, it should be done first. a wordlist (or 'dictionary') is a list of all known words (such as the wordlist every hacker needs to keep a dictionary of). an approximate wordlist has a lot of words; a perfect wordlist has words for every letter of the alphabet and a perfect wordlist for most of the languages of the world. 5ec8ef588b
